WORD/Term	Meaning/Fullform	DESI_application_USE_
Soc	system on chips	integrated circuit that combines most or all key components of a computer or electronic system onto a single microchip
PCIe 6	external network used to connect hardware to the main host computer system.	connects high-bandwidth components such as graphics cards (GPUs), NVMe SSDs, and network adapters directly to the CPU or chipset via dedicated lanes, eliminating bandwidth contention.
AXI4	network	*used for communication inside the SoC or accelerator.*
GDSII	binary database file format which is the de facto industry standard for electronic design automation (EDA) data exchange of integrated circuit	final 3D geometric file format sent to the manufacturing plant to actually print the chip
OpenROAD/OpenLane		software tools used to perform the physical design and layout of the chip
